Engineering and Design

**EARTHQUAKE DESIGN AND EVALUATION OF
CONCRETE HYDRAULIC STRUCTURES**
Table of Contents

Chapter 1

Introduction

	Page
1.1 Purpose.....	1-1
1.2 Applicability.....	1-1
1.3 References.....	1-1
1.4 Distribution Statement.....	1-1
1.5 Mandatory Requirements.....	1-1
1.6 Scope.....	1-1

Chapter 2

Design Criteria

	Page
2.1 Design Earthquake ground Motion.....	2-1
a. General	2-1
b. Operational basis earthquake	2-1
c. Maximum design earthquake	2-1
2.2 Performance Levels.....	2-1
a. General	2-1
b. Serviceability performance	2-1
c. Damage control performance	2-1
d. Collapse prevention performance	2-1
2.3 Performance Goals.....	2-2
a. General	2-2
b. Ductile behavior	2-2
c. Limited-ductile behavior	2-2
d. Brittle behavior	2-3
2.4 Design Requirements.....	2-5
a. Strength design	2-5
b. Serviceability design	2-5
c. Loading combinations	2-5
(1) Earthquake strength design loading combination	2-5
(2) Serviceability loading combination	2-5
2.5 Performance Evaluation.....	2-6
a. Plain concrete structures	2-6
(1) General	2-6
(2) Response to internal force or displacement controlled	2-6

actions	
(3) Response to stability controlled actions	2-8
b. Reinforced concrete structures	2-10
(1) General	2-10
(2) Response to internal forces or displacement controlled actions	2-10
(3) Response to stability controlled actions	2-12
(4) Performance evaluation – DCR allowable values	2-14
2.6 Mandatory Requirements.....	2-15
Chapter 3	
Estimating Earthquake Ground Motion Demands	Page
3.1 Specification of Earthquake Ground Motions.....	3-1
a. General	3-1
b. Using response spectra for earthquake design and analysis	3-1
c. Standard response spectra	3-1
d. Site-specific response spectra	3-1
e. Acceleration time histories	3-2
f. Selection of records for deterministically defined and probabilistically defined earthquakes	3-2
3.2 Multi-Directional Effects.....	3-3
a. General	3-3
b. Percentage combination method	3-3
c. SRSS method	3-4
d. Critical direction of ground motion	3-4
e. Load combination cases for time-history analysis	3-4
3.3 Earthquake Demands on Inelastic Systems.....	3-5
a. General	3-5
b. Inelastic displacement demands	3-5
(1) Equal acceleration response	3-5
(2) Equal energy response	3-6
(3) Equal displacement response	3-7
(4) General relationship between yield strength and elastic demand	3-8
3.4 Mandatory Requirements.....	3-8
a. Standard spectra	3-8
b. Site-specific spectra	3-8
c. Acceleration time histories	3-8
d. Multi-directional effects	3-8
Chapter 4	
Methods of Seismic Analysis and Structural Modeling	Page
4.1 Progressive Analysis.....	4-1
4.2 Methods of Analysis.....	4-1
a. Seismic coefficient method	4-1

b.	Equivalent lateral force method	4-1
c.	Response spectrum-modal analysis procedure	4-5
d.	Time history-modal analysis procedure	4-5
e.	Nonlinear time history-direct integration procedure	4-5
4.3	Modeling of Structural Systems.....	4-6
a.	Structure models	4-6
	(1) General	4-6
	(2) Frame type models	4-6
	(3) 2D models	4-7
	(4) 3D models	4-7
	(5) SSI models	4-7
b.	Foundation models	4-7
	(1) Massless rock foundation model	4-7
	(2) Viscoelastic rock foundation model	4-8
	(3) Finite-element SSI model	4-8
	(4) Lumped-parameter soil foundation model	4-8
c.	Pile foundation models	4-8
	(1) Single-pile kinematic seismic response analysis	4-9
	(2) Pile-head stiffness or impedance functions	4-9
	(3) Substructure method	4-11
	(4) Complete or direct method of analysis	4-11
d.	Fluid-structure interaction	4-13
e.	Backfill-structure interaction effects	4-13
4.4	Effective Stiffness.....	4-13
a.	Plain concrete structures	4-13
b.	Reinforced concrete structures	4-14
4.5	Damping.....	4-14
4.6	Interaction with Backfill Soil	4-15
a.	General	4-15
b.	Dynamic pressures of yielding backfill	4-15
c.	Dynamic pressures of non-yielding backfill	4-15
d.	Intermediate case	4-15
4.7	Permanent Sliding Displacement.....	4-16
4.8	Mandatory Requirements.....	4-18
Chapter 5		
Concrete Properties and Capacities		Page
5.1	Plain Concrete Structures.....	5-1
a.	General	5-1
b.	Testing	5-1
c.	Concrete Coring and Specimen Parameters	5-1
d.	Dynamic properties	5-1
e.	Capacity (strength)	5-2
5.2	Reinforced Concrete Structures.....	5-2

a.	General	5-2
b.	Compressive strains in CHS	5-3
c.	Potential modes of failure	5-3
d.	Shear (diagonal tension)	5-3
e.	Sliding shear	5-5
f.	Reinforcing steel anchorage	5-6
g.	Reinforcing steel splices	5-6
h.	Fracture of reinforcing steel	5-7
i.	Flexure	5-7
5.3	Reinforced Concrete Displacement Capacities.....	5-7
5.4	Mandatory Requirements.....	5-8
a.	Plain concrete structures	5-8
b.	Reinforced concrete structures	5-8
Chapter 6		
Analysis Procedures and Evaluation of Results		Page
6.1	Introduction.....	6-1
6.2	Seismic Design and Evaluation Using DCR Approach.....	6-1
a.	General	6-1
b.	Flexural performance for MDE	6-1
c.	Shear performance for MDE	6-2
d.	Flexural performance for OBE	6-2
e.	Shear performance for OBE	6-2
6.3	Linear Static Procedure and Linear Dynamic Procedure.....	6-2
a.	General evaluation process	6-2
b.	Evaluation process for plain concrete structures	6-2
c.	Evaluation process for reinforced concrete structures	6-2
d.	Evaluation process for gravity dams	6-3
(1)	Response spectrum analysis	6-3
(2)	Linear Time History Analysis	6-3
e.	Evaluation process for arch dams	6-3
(1)	Response spectrum analysis	6-4
(2)	Linear time history analysis	6-4
f.	Evaluation process for intake towers	6-4
(1)	Response spectrum analysis	6-4
(2)	Linear time history analysis	6-4
g.	Evaluation process for locks	6-5
(1)	Response spectrum analysis	6-5
(2)	Linear time history analysis	6-5
6.4	Acceptance criteria for linear-elastic analysis.....	6-5
a.	ELF and response spectrum analysis	6-5
b.	Pile interaction factors (demand-capacity ratios)	6-8
c.	Time history analysis – reinforced concrete structures	6-8
(1)	FEMA 273 approach	6-8
(2)	EM1110-2-6051 cumulative duration approach	6-9

d.	Time history analysis – plain concrete structures	6-10
	(1) Concrete gravity dams	6-10
	(2) Concrete arch dams	6-11
6.5	Nonlinear Static Procedure.....	6-12
a.	Displacement ductility evaluation	6-12
b.	Pushover method	6-13
6.6	Nonlinear Dynamic Procedure.....	6-16
a.	General	6-16
b.	Gravity dams	6-16
c.	Arch Dams	6-17
d.	Reinforced Concrete Structures	6-18
6.7	Design vs. Evaluation.....	6-18
6.8	Minimum Steel Requirements for New Reinforced Concrete Structures.....	6-19
6.9	Mandatory Requirements.....	6-19
a.	Linear static and linear dynamic evaluations	6-19
b.	Nonlinear static and nonlinear dynamic evaluations	6-19
c.	Minimum reinforcing steel requirements	6-19
Chapter 7		
Methods to Evaluate the Seismic Stability of Structures		Page
7.1	Introduction.....	7-1
7.2	Rigid Structure vs. Flexible Structure Behavior.....	7-1
7.3	Sliding Stability.....	7-2
a.	Seismic coefficient method	7-2
b.	Permanent sliding displacement approach	7-2
	(1) Upper-bound estimate – rigid behavior	7-2
	(2) Upper-bound estimate – flexible behavior	7-2
c.	Response history analysis procedure	7-3
	(1) Linear time-history analysis	7-3
	(2) Nonlinear time-history analysis	7-3
7.4	Rotational Stability.....	7-4
a.	General	7-4
b.	Tipping potential evaluation	7-4
c.	Energy based-rotational stability analysis	7-5
d.	Time-history and rocking spectrum procedures	7-6
	(1) Time history and rocking spectra	7-6
	(2) Governing equations	7-6
	(3) Time history solution	7-7
	(4) Rocking spectra	7-8
7.5	Mandatory Requirements.....	7-9

Appendix A	References
Appendix B	Developing Standard Response Spectra and Effective Peak Ground Accelerations for Use in the Design and Evaluation of Civil Works Projects
Appendix C	Ground Motion Example Problems
Appendix D	Pushover Analysis of Intake Towers
Appendix E	Pushover Analysis of Pile-Founded Navigation Locks
Appendix F	Nonlinear Analysis of Arch Dams
Appendix G	Dynamic Soil-Structure-Interaction Analysis of Kentucky Lock Wall
Appendix H	Nonlinear Time History Analysis of Gravity Dams
